

IN THE CLAIMS:

The status of each claim that has been introduced in the above-referenced application is identified in the ensuing listing of the claims. This listing of the claims replaces all previously submitted claims listings.

1. (Currently amended) A programmed material consolidation system, comprising:  
a plurality of ~~fabrication~~programmed material consolidation sites; and  
at least one common component useful with more than one of the plurality of  
~~fabrication~~programmed material consolidation sites.

2. (Original) The programmed material consolidation system of claim 1, wherein  
the at least one common component comprises a material consolidation system.

3. (Original) The programmed material consolidation system of claim 2, wherein  
the material consolidation system comprises a location control element.

4. (Currently amended) The programmed material consolidation system of claim 3,  
wherein the location control element is configured to direct consolidating energy to a selected  
~~fabrication~~programmed material consolidation site.

5. (Original) The programmed material consolidation system of claim 3, wherein  
the location control element comprises a plurality of galvanometers.

6. (Currently amended) The programmed material consolidation system of claim 3,  
further comprising:  
a plurality of mirrors positioned to direct consolidating energy from the material consolidation  
system toward each ~~fabrication~~programmed material consolidation site associated  
therewith, each mirror of the plurality of mirrors being located within a range of  
movement of the location control element.

7. (Original) The programmed material consolidation system of claim 1, wherein the at least one common component comprises a cleaning component for removing unconsolidated material from fabricated objects or fabrication substrates that carry fabricated objects.

8. (Currently amended) The programmed material consolidation system of claim 1, wherein the at least one common component comprises a substrate handling system associated with more than one of the plurality of ~~fabrication~~programmed material consolidation sites.

9. (Original) The programmable material consolidation system of claim 8, wherein the substrate handling system comprises a rotary feed system.

10. (Original) The programmable material consolidation system of claim 8, wherein the substrate handling system comprises a linear feed system.

11. (Currently amended) The programmable material consolidation system of claim 8, wherein the substrate handling system is configured to introduce one or more substrates into each of the plurality of ~~fabrication~~programmed material consolidation sites.

12. (Original) The programmable material consolidation system of claim 8, further comprising:  
a cleaning component.

13. (Currently amended) The programmable material consolidation system of claim 12, wherein the substrate handling system is configured to transport one or more substrates having at least one feature fabricated thereon from a ~~fabrication~~programmed material consolidation site of the plurality of ~~fabrication~~programmed material consolidation sites to the cleaning component.

14. (Currently amended) The programmable material consolidation system of claim 13, wherein the substrate handling system is configured to transport substrates from each of the plurality of ~~fabrication~~programmed material consolidation sites to the cleaning component.

15. (Original) The programmable material consolidation system of claim 14, further comprising:  
at least one processing element for controlling operation of the substrate handling system.

16. (Currently amended) The programmable material consolidation system of claim 15, wherein the at least one processing element is configured to orchestrate movement of substrates from the plurality of ~~fabrication~~programmed material consolidation sites to the cleaning component.

17-22 (Canceled)

23. (Previously presented) A programmed material consolidation system, comprising:  
means for selectively directing consolidating energy toward at least two distinct fabrication sites  
of a programmed material consolidation system to consolidate previously unconsolidated material at each of the at least two distinct fabrication sites..

24. (Currently amended) The programmed material consolidation ~~method~~system of claim 23, wherein the means for selectively directing is configured to direct the consolidating energy toward at least one substrate at at least one of the at least two distinct fabrication sites.

25. (Currently amended) The programmed material consolidation ~~method~~-system of claim 24, further comprising:  
means for removing the at least one substrate from a first fabrication site of the at least two fabrication sites as consolidating energy is directed toward a second fabrication site of the at least two fabrication sites.
26. (Currently amended) The programmed material consolidation ~~method~~-system of claim 25, further comprising:  
means for placing another substrate at the first fabrication site following the removing.
27. (Currently amended) The programmed material consolidation ~~method~~-system of claim 26, wherein the means for selectively directing is configured to redirect consolidating energy toward the first fabrication site after consolidating energy has been directed toward the second fabrication site and after placement of the another substrate in the first fabrication site.
28. (Currently amended) The programmed material consolidation ~~method~~-system of claim 23, wherein the means for selectively directing consolidating energy comprises means for selectively directing a beam of ultraviolet radiation.
